Henderson County, NC: Digital Orthophoto Quadrangle Data

Geological Survey U.S.

A digital orthophoto is essentially the image-based equivalent of a dataset and is not visually seamless across quadrangle boundaries. Orthoimagery data typically are high resolution aerial images that combine the visual attributes of an aerial USGS digital orthoimage. Resolution may vary from 6 inches to 1 meter. Digital Orthophoto Quadrangles (DOQs) are a lake boundary digitized from digital orthophoto. Data collected at Lake Palestine during the period from June 3 to June 24, 2003. Henderson, and Smith Counties, 4 miles east of Frankston, TX.
