
The book covers various aspects of decision making in sport, including the role of attention, anticipation, and motor learning. It explores the concept of the hot-hand fallacy, where an athlete's performance is overestimated after a streak of successful shots. The authors also discuss the impact of stress on performance and the role of superstition in sports.

In sport, failure often comes down to fine judgments, which are critical to good performance. The book highlights the importance of decision making in high-stakes situations, such as when making a shot in basketball. The authors also emphasize the role of practice in developing effective decision-making skills.

Overall, the book provides a comprehensive look at the psychological and cognitive factors that influence decision making in sport. It is an essential resource for coaches, athletes, and sport scientists.
introduces the fundamental approaches of Judgment and Decision-Making JDM research in psychology and. Judgment, Decision Making and Success in Sport von Michael Bar. 14 Nov 2014. This study examined the integration of professional judgement and decision-making processes in adventure sports coaching. The study utilised
