Autism treatment in the first year of life: a pilot study of infant start. The growth that takes place during the first year of an infant’s life is astonishing. There’s no other period in life where physical, mental, and social development is so rapid. The development of the first year is one of the most critical stages in childhood development. From the moment they open their eyes for the first time, infants begin to explore the world around them and develop at an amazing speed. Her weight will double by 5 to 6 months, and triple by her first birthday. Every parent is curious and concerned about infant development. The following milestones are listed under the FIRST month in the baby's first year of life:
